

Edit Availability

Basic Course:

The system displays Edit Availability Page. The staff member clicks on the date that he/she wants to adjust the available hours for 2/17/20 and makes 3pm to 5pm unavailable. The system checks against the master available hours list and finds no conflicts. The system displays the edit available hours confirmation page, and after the staff member accepts it, the system updates the master available hours list. It then invokes the check availability use case.

Alternate Course:

Hours outside gym hours: The staff member tries to make 7pm-12pm available on 2/17/20. The system checks with the master available hours list and notices this is outside possible hours. The system then displays “These are not valid hours” message on error page and displays Edit Availability Page again.

Hours Interfere with a scheduled event: The staff member tries to make 3pm-5pm available on 2/17/20. The system checks with the master available hours list and notices this interferes with a scheduled event. The system then displays “There is an event that interferes with these hours” message on error page and displays Edit Availability Page again.
